## **B.E. Civil Engineering**

Esd.1917

**DEPARTMENT OF CIVIL ENGINEERING  
UNIVERSITY COLLEGE OF ENGINEERING**

**(Autonomous)**

**OSMANIA UNIVERSITY**

**Hyderabad – 500 007, TG, INDIA**

Esd.1929

## **INSTITUTION**

The University College of Engineering is established in the prestigious Osmania University, Hyderabad in the year 1929 having the distinction of being the 6<sup>th</sup> oldest Engineering College in the then British India. The college became autonomous in the year 1994. Over the decades, the UCE(A), OU has produced several illustrious alumni who brought laurels to the nation at world forums. The college is offering BE in eight branches viz., AI&ML, BME, CE, CSE, EEE, ECE, ME and Mining Engineering; ME in 22 specialisations with majority of them receiving NBA Accreditation. The college offers Ph.D. in all ME specialisations. The college has well established laboratories and research facilities and well placed in NIRF Rankings. The faculty members are well qualified and several of them received Best Teacher Award from Government of Telangana state. They are serving as expert members on several professional bodies. The faculty members authored several research publications, text/reference books and extend consultancy services.

### **Vision**

The Vision of the institute is to generate and disseminate knowledge through harmonious blending of science, engineering and technology. To serve the society by developing a modern technology in students' heightened intellectual, cultural, ethical and humane sensitivities, fostering a scientific temper and promoting professional and technological expertise.

### **Mission**

- To achieve excellence in Teaching and Research
- To generate, disseminate and preserve knowledge
- To enable empowerment through knowledge and information
- Advancement of knowledge in Engineering, Science and Technology
- Promote learning in free thinking and innovative environment
- Cultivate skills, attitudes to promote knowledge creation
- Rendering socially relevant technical services to the community
- To impart new skills of technology development
- To inculcate entrepreneurial talents and technology appreciation programmes
- Technology transfer and incubation

## **DEPARTMENT**

The Department of Civil Engineering was established in the year 1929 and was the first Department to commence the undergraduate programme at University college of Engineering, Osmania University. Over the years, the Department grew from strength to strength in terms of its academic achievements and infrastructure development. Currently, the Department offers BE in Civil Engineering; ME in Structural Engineering, Geotechnical Engineering, Water Resources Engineering and Transportation Engineering specializations and PhD programs. The Department also has the distinction of enrolling large number of foreign students both at UG and PG level.

The Department provides research and consultancy services to various organizations. Several faculty members have received prestigious awards including the Best Teacher awards of the State Government and the Best Publication awards reflecting their teaching abilities and the research contribution. Many of the faculty members are listed in several national and international biographical directories. The faculty has published over 1500 papers in various international and national journals and conferences besides text books and professional books.

### Vision

To be as a leading academic department on pace with global standards and contribute to the development of economic, technically viable and useful to societal problems and challenges of civil engineering profession and also contribute to the regional and country's developmental activities.

### Mission

- To produce highly competent and capable professionals to face the challenges and provide viable solutions to Civil Engineering problems
- Integration of their knowledge and skills to excel in the profession through continuous learning and contribute to the well being of the society.
- To enhance the technical knowledge, research aptitude to serve the society in highly competent manner.

### **Programme Educational Objectives (PEO):**

**PEO1:** Impart basic knowledge in the field of Civil Engineering.

**PEO2:** Develop skills to analyse and provide viable solutions to various Civil Engineering problems.

**PEO3:** Enhance communication skills and encourage team work.

**PEO4:** Prepare Civil Engineering professionals with zeal for research, life-long learning, and work for sustainable development of society with ethics.

### **PROGRAM OUTCOMES (POs)**

| POs | Engineering Graduates will be able to:                                                                                                                                                                                                                                                           |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PO1 | <b>Engineering Knowledge:</b> Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.                                                                                                          |
| PO2 | <b>Problem Analysis:</b> Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.                                                         |
| PO3 | <b>Design/development of solutions:</b> Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO4 | <b>Conduct investigations of complex problems:</b> Use research based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.                                                        |
| PO5 | <b>Modern tool usage:</b> Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.                                                         |
| PO6 | <b>The engineer and society:</b> Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.                                                       |
| PO7 | <b>Environment and sustainability:</b> Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.                                                                           |
| PO8 | <b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.                                                                                                                                                            |

|                                         |                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO9</b>                              | <b>Individual and team work:</b> Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.                                                                                                                                                   |
| <b>PO10</b>                             | <b>Communication:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| <b>PO11</b>                             | <b>Project management and finance:</b> Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.                                               |
| <b>PO12</b>                             | <b>Lifelong learning:</b> Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.                                                                                                                   |
| <b>PROGRAM SPECIFIC OUTCOMES (PSOs)</b> |                                                                                                                                                                                                                                                                                                          |
| <b>PSO1</b>                             | <b>Analytical Skill :</b> Ability to plan, execute, manage and rehabilitate Civil Engineering systems and processes                                                                                                                                                                                      |
| <b>PSO2</b>                             | <b>Entrepreneurial Skill :</b> Ability to become independent practitioners, consultant and entrepreneurs in the field of Civil Engineering                                                                                                                                                               |

### MAPPING OF PEO'S WITH PO'S

| S.No. | PEO Statement                                                                                                                                    | M1 | M2 | M3 |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------|----|----|----|
| PEO 1 | Impart basic knowledge in the field of Civil Engineering                                                                                         | 3  | 2  | 2  |
| PEO 2 | Develop skills to analyse and provide viable solutions to various Civil Engineering problems.                                                    | 3  | 3  | 2  |
| PEO 3 | Enhance communication skills and encourage team work.                                                                                            | 2  | 2  | 1  |
| PEO 4 | Prepare Civil Engineering professionals with zeal for research, life-long learning, and work for sustainable development of society with ethics. | 3  | 3  | 3  |

#### Rubrix

- 1 : Weakly mapped**  
**2 : Moderately mapped**  
**3 : Strongly mapped**

| PEO   | Justification and rationale of the mapping                                                                                                                          |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PEO 1 | Mainly focuses on imparting basic knowledge in Civil Engineering to produce highly competent and capable professionals. Accordingly, the correlations are assigned. |
| PEO 2 | Emphasis is on training to inculcate analytical skills to design various Civil Engineering problems. Hence, the correlations are allotted.                          |
| PEO 3 | Focuses on personality development, character building and to work with peers. Therefore, the correlations are justified.                                           |
| PEO 4 | Equip with required skills to effectively tackle the real life problems of Civil Engineering in sustainable manner. Therefore, M1 to M3 are in good agreement.      |

|                |     |                | 3   | - | -        | 3 |
| Evaluation     | SEE | 60 Marks       | CIE |   | 40 Marks |   |

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                        |
|----|----------------------------------------------------------------------------------------------------------------------------------------|
| 1. | Introduction of Particulate Mechanics further to the solid and fluid mechanics                                                         |
| 2. | Characterization and classification of soils based on laboratory and field experiments                                                 |
| 3. | Understanding of seepage, strength and compressibility characteristics of soils and learn the analysis of applications involving them. |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                                                                   |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Able to perform the laboratory tests to determine the index properties and based on them, able to identify and classify the soils                                 |
| CO-2 | Knowledgeable about the soil-moisture interaction and competent to find the permeability characteristics and perform seepage analysis                             |
| CO-3 | Learned about the compaction and consolidation theory and prepared for taking up field compaction and capable of performing the consolidation settlement analysis |
| CO-4 | Proficient about strength characteristics of soils and competent to determine the shear strength parameters through laboratory tests                              |
| CO-5 | Able to perform earth pressure and slope stability analyses.                                                                                                      |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

## UNIT - I

Origin & Classification of Soils: Soil as a pseudo-elastic three phase particulate medium  
Physical Properties of soil: Weight ratios (Water content, Density, Unit weights, Specific Gravity); Volume ratios (void ratio, porosity, degree of saturation, relative density); Inter relationships, Laboratory tests for determination of Index properties. Classification and Identification of soils for general and engineering purposes as per IS: 1498-1970.

## UNIT - II

Soil Moisture States: Held and Free moisture-Capillarity in Soils: Surface tension and capillary rise in soil, Capillary tension, Capillary pressure. pF value.

Permeability of Soils: Darcy's law for flow through soils - validity of Darcy's Law - Factors affecting permeability - Laboratory tests for determination of co-efficient of permeability (constant head, variable head permeability tests) - Field tests (Pumping in and pumping out tests) - Equivalent permeability of stratified soils.

Seepage in Soils: Seepage flow, seepage pressure - Flow nets - Locating phreatic line in a homogeneous earthen dam using Kogeny's parabola - Computation of seepage quantity.

Stress in Soils: Total, effective and neutral stress distribution in different ground conditions

Quick Sand phenomena: Critical Hydraulic gradient, Remedial measures.

## UNIT - III

Compaction Process: Compaction Mechanism; factors affecting compaction. Laboratory determination of compaction characteristics - standard and modified Proctor tests - IS Light and Heavy compaction tests; Field surface compaction: compaction equipment, procedure, quality control.

Consolidation Process: Spring analogy - Void ratio and effective stress ( $e$  Vs  $\log p$ ) relationship - Terzaghi's theory of one dimensional consolidation - Assumptions and derivation of GDE- Computation of magnitude of settlement (using  $C_c$ ,  $m_v$ ) and rate of settlement ( $c_v$ ,  $T_v$ ,  $d$ ) classification based on OCR.

## UNIT - IV

Shear Strength: Significance of Shear strength in soils - Mohr - Coulomb equation - shear parameters - Laboratory tests for determination of shear strength - Direct shear test, Tri-axial compression test, Un-confined compression test, Vane shear test, Factors affecting shear strength of cohesion-less and cohesive soils.

## UNIT - V

Earth Pressure: States of earth pressure - Active, passive, at rest condition; Rankine's theory: Computation of active and passive earth pressure in c-less and cohesive soils; Coulomb's Wedge theory: Rehman's graphical solution: stability of earth retaining gravity wall.

Slope stability: Definition and classification of slopes -types of slope failure - Factors of safety with respect to cohesion, angle of shearing resistance, Height - Analysis of stability of slope using Swedish slip circle method and Taylor's stability number.

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                           |
|----|-----------------------------------------------------------------------------------------------------------|
| 1. | Providing awareness about water rights and water management principles                                    |
| 2. | Providing Knowledge regarding the fixation gravity dams dimension and fixing various levels in reservoirs |
| 3. | Imparting basic concepts of planning for hydro power projects                                             |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                          |
|------|--------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Knowledge about principles of irrigation and water rights and ability to design and fix up reservoir systems and levels. |
| CO-2 | Understand and analyze structural behaviour, failure modes and design principles of Gravity dams                         |
| CO-3 | Capability to examine seepage through phreatic lines, and design earthen dams with appropriate seepage control measures  |
| CO-4 | Recognize various failures of tank systems and also ability to design the profile of spillways                           |
| CO-5 | Comprehend various components and layout of Hydro power stations and analyze the design aspects.                         |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

### UNIT - I

**Water Resources Projects:** Single and multipurpose projects, general principles of irrigation water rates, components of water allocation systems, riparian rights, groundwater rights, environmental and water quality management aspects of reservoir system operations.

**Storage works:** Purpose, selection of site, zones of storage, computation of storage capacity, fixation of different levels of reservoirs (LWL, FRL, MWL), evaporation reduction techniques.

## UNIT - II

**Dams:** Classification of dams, selection of site for a dam, physical factors governing the selection of types of a dam.

Gravity dams : Forces acting on a gravity dam, modes of failure and criteria for structural stability of gravity dams, principal and shear stresses, gravity method of stability analysis, elementary and practical profiles of a gravity dam, high and low gravity dams, functions, and types of galleries in gravity dams, foundation treatment for gravity dams.

## UNIT - III

**Earth dams:** Types of earth dams, causes of failure of earth dams, criteria for the safe design of an earth dam, computation of seepage from flow net, phreatic line in an earth dam (for homogeneous sections with and without filter cases), design of earth dams to suit available materials, embankment and foundation seepage control measures.

## UNIT - IV

**Tank irrigation:** Types, site selection, causes for the failure of tank weirs, design of tank weirs, and general specifications for the construction of tank weirs.

**Spillways:** Different types of spillways, energy dissipation below spillways, different types of spillway crest gates, stilling basin appurtenances (descriptive details only).

## UNIT - V

**Hydro-power:** Comparison of hydro power with thermal power, classification of hydro power plants, definition of various terms, principal components of hydro-electric power plants (Forebay, intake structure, penstock & surge tank), economical diameter of penstock.

**Power house:** Substructure and super structure of a power house, merits and demerits of an underground power house, fixation of dimensions of a power house.

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|   |                                                                                                                           |
|---|---------------------------------------------------------------------------------------------------------------------------|
| 1 | Understand basic methods for the analysis of statically indeterminate beams and frames using various displacement methods |
| 2 | To analyse the beams for displacements due to sinking of supports by various displacement methods                         |
| 3 | To evaluate bending moment and shear forces for Three Hinged and Two hinged arches under different Loading Conditions     |
| 4 | To evaluate bending moment and Shear force of Multi Storied Frames subjected to Vertical loads.                           |
| 5 | To evaluate bending moment and Shear force of Multi Storied Frames subjected to Horizontal loads using various methods.   |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                              |
|------|------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | To determine displacement for Beam and Portal Frame with and without sinking Support using Slope Deflection Method.          |
| CO-2 | To determine bending moment and shear force for Beam and Portal Frame with and without sway using Moment Distribution Method |
| CO-3 | To determine displacement for beam and Portal Frame with and without sway using Kani's Method                                |
| CO-4 | Analyze and sketch bending moment and shear force for three hinged and two hinged arches                                     |
| CO-5 | To analyze multistoried frames using approximate methods for vertical and horizontal loads and sketch                        |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

## UNIT - I

**Slope Deflection Method:** Application of the method to continuous beams with and without sinking of supports, single bay - portal frames (Degree of freedom not exceeding three), loading on each span may be point load(s) or uniformly distributed load on whole span, shear force and bending moment diagrams.

## UNIT - II

**Moment Distribution Method:** Application of the method to continuous beams with and without sinking of supports, portal frames (static indeterminacy not exceeding three), loading on each span may be point load(s) or uniformly distributed load on whole span, shear force and bending moment diagrams.

## UNIT - III

**Kani's Method:** Application of the method to continuous beams with and without support sinking, portal frames (static indeterminacy not exceeding three), and loading on each span may be point load(s) or uniformly distributed load on whole span, shear force and bending moment diagrams.

## UNIT - IV

### **Approximate Method of Analysis.**

Multi-storied building frames: Analysis due to vertical loads by substitute frame method – Analysis due to lateral loads by portal method, cantilever method and factor method.

## UNIT - V

**Elastic Theory of Arches:** Eddy's theorem, three hinged parabolic and segmental arches, determination of horizontal thrust, bending moment, normal thrust and radial shear for static loading,

**Two hinged arches:** parabolic and segmental, determination of horizontal thrust, bending moment, normal thrust and radial shear for static loading

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I:

**Materials and Specifications:** Chemical composition of steel, types of Structural Steel, Residual stresses, Stress Concentration. **Basis of Structural Design:** Codes and Specifications, Design Philosophies, working Stress Method, Limit State Method.

**Loading and Load Combinations:** Characteristic Loads, Dead Loads, Imposed Loads, Earthquake Loads, Wind Loads and Load Combinations. Partial safety factors for materials and loads.

**Bolted Connections (Limit state method):** Bolted Connections, Behavior of Bolted Joints, Design Strength of Ordinary Black Bolts, Design Strength of High Strength Friction Grip Bolts, Pin Connections, Simple Connections and Eccentric Connections.

**Welded Connections (Limit State Method):** Advantages of Welding, Types of Welds and Joints, Simple Connections and Eccentric Connections.

#### UNIT-II

**Design of Tension Members (Limit State Method):** Types of Tension Members, Design of Strands, Slenderness Ratio, Modes of Failure, Factors Effecting Strength of Tension Members, Design of Tension Members (Angles, Other sections and Rods), Lug Angles, Tension Member Splice.

#### UNIT-III

**Design of Compression Members (Limit state method):** Introduction, Possible Failure Modes, Behavior of Compression Members, Elastic Buckling of Slender Compression Members, Behavior of Real Compression Members, Sections of Compression Members, Effective Length, Design of Compression Members with Single Section and Built-up Sections (Symmetric in both directions), Lacing and Battening, Column Splices. Design of Column Bases (Limit state method): Design of Slab Base and Gusseted Base for Columns.

#### UNIT-IV

**Design of Beams (Limit state method):** Types of Beams, Section Classification, Lateral Stability of Beams, Buckling of Real Beams, Behavior of Beams in Bending, Design of Laterally Supported and Unsupported Beams, Design of Compound Beams, Shear Strength of Beams, Maximum Deflection, Web Buckling and Web Crippling, Biaxial Bending and Unsymmetrical Bending.

#### UNIT- V

**Design of Roof Trusses (Limit state method):** Types of Trusses, End Bearings, Spacing of Trusses and Purlins, Estimation of Loads with different Roof Coverings, Self-weight of Truss, Wind Effects, Design of Purlins for Dead Load, Imposed Load and Wind Loads. Detailed Design of Roof Trusses including Joints and Supports (only Angular Trusses).

### Course Objectives:

The course is taught with the objectives of enabling the student to:

|   |                                                                                              |
|---|----------------------------------------------------------------------------------------------|
| 1 | Emphasize the significance of geometric design of highways with specifications and standards |
| 2 | To describe basic techniques for collecting and analysing traffic data, diagnosing problems. |
| 3 | To impart knowledge on pavement materials                                                    |
| 4 | Create awareness on Flexible pavement design                                                 |
| 5 | Impart knowledge on Rigid pavement design                                                    |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                  |
|------|------------------------------------------------------------------|
| CO-1 | Assimilation of the various concepts of Highway geometric design |
| CO-2 | Application of concepts related to traffic engineering           |
| CO-3 | Knowledge related to selection of pavement materials             |
| CO-4 | Able to design flexible pavements                                |
| CO-5 | Analyze and Design the rigid pavements                           |

Correlation rating: Low/ Medium/High:1/2/3respectively.

### UNIT-I

**Highway development and planning**-Classification of roads, road development in India, Current road projects in India; highway alignment and project preparation.

**Geometric design of highways**- Introduction; highway cross section elements; sight distance, design of horizontal alignment; design of vertical alignment; design of intersections, problems

### UNIT-II

**Traffic Engineering & control**- Traffic Characteristics, traffic engineering studies, traffic flow and capacity, traffic regulation and control; Type of road markings & Signs; design of signals,

capacity analysis and design of rotary intersections, parking facilities; accident studies; highway lighting; problems.

### **UNIT-III**

**Pavement materials-** Materials used in Highway Construction; desirable properties, tests, requirements for different types of pavements: Soils, Stone aggregates, bituminous binders, bituminous paving mixes, introduction to Marshall Mix method; Portland cement, types of cement concrete: desirable properties, tests on cement and hardened concrete, requirements for different types of pavements; problems.

### **UNIT IV**

**Flexible Pavements-**Types of pavements and factors affecting design of flexible pavement, performance; stresses in flexible pavements; design of flexible pavements as per IRC:37-2018; Surface and Sub-surface drainage systems, Thickness design problems. Distresses in flexible pavement, causes and performance indicators.

### **UNIT-V**

**Rigid pavements-** Components and functions; factors affecting design stresses in rigid pavements; types of joints, design of concrete pavements as per IRC:58-2015; Design of dowel bars and tie bars, Distresses, causes and performance of CC pavements. Design problems.

### Course Objectives:

The course is taught with the objectives of enabling the student :

|    |                                                                                               |
|----|-----------------------------------------------------------------------------------------------|
| 1. | Understand the basic concepts of repairs, maintenance, cracks and deterioration of structures |
| 2. | Know the causes of corrosion in RC structures.                                                |
| 3. | Understand and learn the corrosion mechanism in steel structures                              |
| 4. | Diagnosis the evaluation of repair techniques in masonry structures                           |
| 5. | Learning the principle of retrofit and rehabilitation techniques.                             |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                                                                        |
|------|----------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Diagnosis the suitable repair and suggest methods to repair of cracks in structures.                                                   |
| CO-2 | Identify repair problems and undertake global and local retrofit techniques for RC structures & prevent deterioration of RC structures |
| CO-3 | Arrive at the repair solutions & diagnosis and suggest methods to prevent deterioration of steel structures                            |
| CO-4 | Diagnosis and suggest methods to prevent deterioration of Masonry structures                                                           |
| CO-5 | Identify and suggest methods to Strengthen of Existing Structures by mean of high level retrofit techniques                            |

Correlation rating: Low/ Medium/High: 1/2/3 respectively.

## UNIT - I

Introduction - Need for study, types of maintenance, routine maintenance works in buildings, inspection, structural appraisal, economic appraisal, general causes of deterioration, general steps for repair and rehabilitation.

Cracks in Buildings - Cracks due to moisture changes, thermal variations, elastic deformation, creep, chemical reactions, foundation settlement and vegetation, diagnosis and repair of cracks.

Moisture Penetration - Sources and effects of dampness, reasons for ineffective damp proof course, remedies for damp masonry walls, leakage of RCC roofs and pitched roofs, causes and remedial measures, Ferro cement overlay, chemical coatings, flexible and rigid coatings.

## UNIT - II

Reinforced Concrete Structures - Causes of deterioration, diagnosis of causes, corrosion of reinforcement and its control, repair of cracks, repair of spalling and disintegration, repair of floors and pavements, conventional methods of repair, special methods, use of polymers, epoxy resins, classification of retrofit techniques – global and local retrofit methods.

## UNIT - III

Steel Structures - Causes and types of deterioration, mechanism of corrosion, prevention of deterioration, influence of design details, design and fabrication errors, stresses due to erection, methods of repair, plating.

## UNIT – IV

Masonry Structures - Causes of deterioration, biocidal treatment, preservatives, repair of crack in masonry walls, mortar joint repair, and removal of stains from masonry walls, classification of retrofit techniques – global and local retrofit methods.

## UNIT – V

Strengthening of Existing Structures - Relieving existing load, strengthening of superstructure, conversion to composite construction, post stressing, jacketing, bonded overlays, addition of reinforcement, strengthening of substructure, underpinning, design for rehabilitation.

**Correlation rating: Low/ Medium/High: 1/2/3 respectively**

## UNIT-I

*Flood characteristics and forecasting:* Measurable features of a flood (Elevation, discharge, volume, and duration), operation of flood forecasting systems, Flood forecasting (unit hydrograph method, meteorological and snow data, and snow field air temperatures)

Space-time characteristics of rainfall - reservoir, spillways, diversion dams and barrages, design flood criteria for dams and other hydraulic structures (CWC recommendations). Policy criteria for design flood of a major and minor

## **UNIT – II**

*Flood routing:* Introduction, Mathematics of flood routing, various methods of flood routing, Hydrologic routing and its applications, Hydraulic routing and its applications

## **UNIT – III**

*Flood mitigation:* Flood mitigation reservoirs - purpose, location, size and operation, Levees and flood walls (location, maintenance and flood fighting), flood ways, Channel improvement, evacuation and flood proofing, land management, Flood plain management, estimating benefits of flood mitigation

## **UNIT-IV**

*Flood plain adjustments and regulations:* Results of controlling floods, alternatives to controlling floods, Range of possible adjustments, practical range of choice, critical characteristics of flood hazards, Classification of flood plain land and regulation of flood plain use.

River training works - guide banks, approach and afflux embankments, spurs / Groynes, artificial cut-offs, bank protection, pitched banks, and miscellaneous methods. Numerical problems

## **UNIT-V**

*Hydrologic Time Series Analysis:* Independent and Auto-correlated data, structure of hydrologic time series, trend, jump, seasonality, stationarity, Auto-covariance and Auto-correlation Function, Correlogram Analysis, spectral Analysis, Analysis of Multi-Variant Hydrologic series.

#### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                    |
|----|--------------------------------------------------------------------|
| 1. | Understand the design procedures for columns and footings.         |
| 2. | To know the design and detailing of flat slab and ribbed slab.     |
| 3. | Understand the design procedures and detailing of retaining walls. |
| 4. | To be able to design the different types of water tanks.           |
| 5. | Be able to understand the IRC Loadings for design of bridges.      |

#### Course Outcomes

On completion of this course, the student will be able to:

|    |                                                             |
|----|-------------------------------------------------------------|
| 1. | Design columns and footing as per IS specifications         |
| 2. | Design and detail flat and ribbed slabs for given loads.    |
| 3. | Design retaining walls and check the stability of the same. |
| 4. | Design different types of water tanks                       |
| 5. | Design and evaluate the loads on bridges based on IRC codes |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

#### UNIT - I

Introduction to Columns and footings, Definition, IS codes. Elastic design and detailing of combined rectangular footings.

#### UNIT - II

**Design of Ribbed slabs and Flat slabs: Introduction to ribbed and flat slabs,** Analysis of the Slabs for Moment and Shears, Ultimate Moment of Resistance, Design for shear, Deflection, Arrangement of

Reinforcements. Flat slabs: IS specifications and general notes on flat slabs Direct design method – Distribution of moments in column strips and middle strip-moment and shear transfer from slabs to columns – Shear in Flat slabs-Check for one way and two way shears – Introduction to Equivalent frame method. Limitations of Direct design method, Distribution of moments in column strips and middle strip.

### UNIT - III

**Retaining Walls** - the different types of Retaining Walls. Proportioning the retaining walls, Determining the Lateral earth pressure on Retaining walls. Perform the Stability checks: overturning, sliding, bearing capacity, and settlement. Elastic design and detailing of retaining walls-cantilever and counter fort types.

### UNIT - IV

Types of water tanks, Definition, IS codes. Elastic design and detailing of rectangular and circular, ground and overhead tanks including Intze tanks. Design of staging.

### UNIT - V

**Bridges:** Introduction to Bridges, Classification of Bridges, Recent advances in Bridge Engineering,. IRC loading – impact factor – effective width method and Pigeaud's method. Elastic design and detailing of (i) R.C. Slab bridges and (ii) T-beam bridges for IRC loadings.

### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                             |
|----|-----------------------------------------------------------------------------------------------------------------------------|
| 1  | Understand basic terminology, development plans and standards relate Airport Engineering.                                   |
| 2  | Understand the various components of airport and runway components.                                                         |
| 3  | Provide details of various geometric standards and design of flexible pavement of runways                                   |
| 4. | Provide details of analysis and design elements related to rigid runway pavements                                           |
| 5. | Study airport layout plans for installation of various types of devices pertaining to Air Traffic Controls and visual aids. |

### Course Outcomes : Completion this course, students will be able to

|      |                                                                                                                |
|------|----------------------------------------------------------------------------------------------------------------|
| CO-1 | Understand the concepts related to airport planning and development.                                           |
| CO-2 | Conduct surveys, develop and design new airports with ICAO/FAA geometric standards.                            |
| CO-3 | Able to conduct analysis and design elements related to flexible runway pavements                              |
| CO-4 | Able to conduct analysis and design elements related to rigid runway pavements                                 |
| CO-5 | Develop plans for installation of various types of devices pertaining to Air Traffic Controls and visual aids. |

**UNIT- I: Airport Planning:** Growth of Air Transport, Technological Developments, Institutional Development for Planning, Regulatory Practices; Aircraft characteristics related to airport planning and design, Future trends in Air craft design and Airport Planning; Airport master plan, site selection, planning surveys etc. Airport Obstructions: Zoning Laws, Classification, Approach and Turning Zones.

**UNIT- II: Runway Design and Airport Capacity:** Runway Orientation, Basic Runway Length and Factors affecting, Correction for elevation, temperature and gradient as per ICAO and FAA, Run way Geometric Design. Airport Capacity: Classification and Standards; Capacity of Airport, Runway; Configuration of Airport and Configuration; Runway Intersection Design; Terminal Facilities and Standards: Planning Concepts. Overview of Geometric Design as per ICAO.

**UNIT-III: Flexible Airport Pavement Design:** Design factors, Calculation of ESWL with different wheel load configurations and methods, Repetition of loads, failure criteria; Flexible Pavements Design: US corps of Engineers Method, FAA method; Drainage: Surface and subsurface methods, Airfield Pavement Maintenance and Rehabilitation: Need, Failures, Evaluation of flexible pavements, Maintenance operations.

**UNIT- IV: RIGID Airport Pavement Design:** Design factors, US corps of Engineers method, PCA Method, FAA method, LCN Method and CAN-PCN System.; Overlays; Drainage: Surface and subsurface methods, Airfield Pavement Maintenance and Rehabilitation: Need, Failures, Evaluation of Rigid Pavements, Maintenance operations.

**UNIT- V: Air Traffic Controls (ATC):** Visual Aids: marking and lighting; Need, Network and Aids for ATC, Radio equipment; Design of Heliports and STOLPORTS: Design Factors, Planning, Site selection. Geometric Designs, Visual Aids. Visual Aids: marking and lighting; Need, Network and Aids for ATC, Radio equipment;

### Course Objectives:

The course is taught with the objectives of enabling the student

|    |                                                                                        |
|----|----------------------------------------------------------------------------------------|
| 1. | Expose the students to different types of soils                                        |
| 2. | Experience the concepts of soil mass, soil solids, and soil structure.                 |
| 3. | Understand the laboratory test procedures and appreciate the suitability of each test. |
| 4. | Make the students to relate theoretical concepts in doing lab tests.                   |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                                                                                                       |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Able to perform the laboratory tests to determine the index properties of soil and able to classify the soil for general and engineering purposes as per IS:1498-1970 |
| CO-2 | Capable of finding the coefficient of permeability of soils through laboratory tests and knowledgeable about the factors affecting it                                 |
| CO-3 | Competent to conduct the laboratory compaction tests and able to perform the field compaction quality control tests                                                   |
| CO-4 | Able to perform the laboratory shear strength tests, analyze the data and compute the shear strength characteristics of the soils                                     |
| CO-5 | Introduced to the advanced laboratory tests on soils and become capable to model field behaviour of soils in the laboratory for research and application              |

Correlation rating: Low/ Medium/High: 1/2/3 respectively.

### List of Experiments:

## **I. DETERMINATION OF INDEX PROPERTIES:**

Determination of

1. Specific Gravity of soil solids using
  - a. Density bottle method
  - b. Pycnometer method
2. Water content using
  - a. Oven drying method
  - b. Pycnometer method
3. Liquid and Plastic limit
4. Sieve Analysis
5. Classification of Soils as per IS:1498-1970
6. Field Density using Sand Replacement Method

## **II. DETERMINATION OF ENGINEERING PROPERTIES:**

Determination of

7. Compaction Characteristics using
  - a. IS Light Compaction Test
  - b. IS Heavy Compaction Test
  - c. Compare and find the effect of Compaction Effort on Compaction mechanism
8. Co-efficient of Permeability by
  - a. Constant Head Permeameter test
  - b. Variable Head Permeameter test
9. Shear strength parameters by
  - a. Direct Shear Test
  - b. Unconfined Compression Test
  - c. Vane Shear Test
10. California Bearing Ratio (CBR) value

## **III. DEMONSTRATION OF TEST PROCEDURE:**

11. Consolidometer test
12. Tri-axial compression Test
13. Laboratory Plate Load Test
14. Reverse Osmosis Test
15. Quick Sand Model
16. Cyclic Tri-axial Test Facility

**Course Objectives :**

The course is taught with the objectives of enabling the student to:

|    |                                                                                                  |
|----|--------------------------------------------------------------------------------------------------|
| 1. | Introduction to the basic concepts and requirements of environmental engineering                 |
| 2. | Knowledge about different sequential unit operations of water and wastewater treatment processes |
| 3. | Inputs on engineering principles for analyzing various environmental issues                      |
| 4. | Awareness towards the sustainability of standards for water resources                            |

**Course Outcomes :**

On completion of this course, the student will be able to :

|      |                                                                                             |
|------|---------------------------------------------------------------------------------------------|
| CO-1 | Aptitude to plan for protected water supply system needs and requirements                   |
| CO-2 | Ability to design sequential unit operations in water treatment plants                      |
| CO-3 | Acquaintance with collection procedures and design of sewerage systems                      |
| CO-4 | Capacity to design for the safe disposal of wastewater and its reuse                        |
| CO-5 | Knack to analyze, execute and maintain standards for sustainable development of the society |

**Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.**

### **UNIT-I**

Water Supply: Need for planned water supply schemes, water demand for industrial and agricultural water requirements, Sources of water, standards and quality issues, water quality requirements for different beneficial uses, Population Forecast, water treatment through aeration, coagulation flocculation, and sedimentation.

### **UNIT – II**

Water Treatment: Filtration, Disinfection, and Softening, methods of layout of distribution pipes, design of distribution by Hardy Cross method for simple networks, various types of pipes and valves used in water supply systems.

### **UNIT – III**

Sewage: Domestic and Storm water, Quantity of Sewage, Sewage flow variations.

Conveyance of sewage: Sewers shapes, design of sewerage systems, operation and maintenance of sewers, sewage pumping, sewer appurtenances

### **UNIT-IV**

River cleaning plans: Self-purification of streams, BOD and COD concepts, wastewater treatment, aerobic and anaerobic treatment system, suspended and attached growth systems, quality requirements of recycled water for various purposes. Principles of Septic Tank

### **UNIT-V**

Advanced WWT concepts: Theory and design concepts of Activated Sludge Process, Mechanically Aerated Lagoons, Sequencing Batch Reactor (SBR), Waste Stabilization Ponds, basic concepts of Bio-Remediation.

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                            |
|----|------------------------------------------------------------------------------------------------------------|
| 1. | Understand the analysis of structural elements subjected to various types of moving loads                  |
| 2. | To understand behavior of the suspension bridge and analyze for stresses along with suspension girder.     |
| 3. | To evaluate bending moment and shear forces of various structural elements using matrix method of analysis |
| 4. | Illustrate the matrix methods of structural analysis for computer applications                             |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                                                      |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Sketch ILD for bending moment and shear force, for determinate girders for different position of loading system and for different sections of girder |
| CO-2 | Analyze cable suspension bridges along with three hinged stiffening girder for static loads                                                          |
| CO-3 | Analyze the redundant beams and frames using Flexibility method                                                                                      |
| CO-4 | Analyze redundant members using direct stiffness method                                                                                              |
| CO-5 | Calculate the bending moment and shear force and sketch the BMD and SFD for redundant members using force and displacement method                    |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

## UNIT - I

Moving loads: Influence line for support reaction, bending moment and shear force at any location for simple beams. Determination of maximum bending moment and shear force for moving load systems on simply supported girders.

Curves of maximum bending moment and shear force: for simply supported girders traversed by (1) single point load, (2) two point loads, (3) uniformly distributed-load longer/shorter than span, enveloping parabola and EUDLL

## UNIT - II

Moving loads on trusses / girders: Influence lines for forces in members of statically determinate plane framed structures under moving loads for Warren girder, Pratt truss, and Curved flange truss.

Suspension bridges: Stresses in suspended loaded cables, length of cable, simple suspension bridge with 3-hinged stiffening girders for static load, Influence lines for horizontal and vertical components of tension in the cable, tension in the cable, bending moment and shear force.

## UNIT - III

Flexibility Matrix Method: Determination of Static and kinematic indeterminacy - Equilibrium and compatibility conditions-Principles of superposition, Application of Flexibility Matrix Method to continuous beams, plane trusses, plane frames and ortho grid structures (Static indeterminacy not exceeding three) - Effect of temperature, Lack of fit and Pre-stressing forces

## UNIT – IV

Stiffness Matrix Method: Application of Stiffness Matrix Method to continuous beams, plane trusses, plane frames and ortho grid structures (Degree of freedom not exceeding three). Construction of stiffness matrix for frames - Direct Method

## UNIT - V

Direct Element Method: Development of stiffness matrices for bar, truss and beam elements. Application of direct element method to problems of axially loaded bars, continuous beams, plane trusses and plane frames to obtain joint displacements and member end forces. Developing shear force and bending moment diagrams. Introduction to software package STAAD Pro

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                 |
|----|-----------------------------------------------------------------|
| 1. | Learn and understand the design of columns and footings.        |
| 2. | Know the design and detailing of flat slabs and ribbed slabs.   |
| 3. | Understand the design process and detailing of retaining walls. |
| 4. | Design the different types of water tanks.                      |
| 5. | Understand the IRC Loadings for design of bridges               |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                             |
|------|-------------------------------------------------------------|
| CO-1 | Design columns and footing as per IS specifications         |
| CO-2 | Design and detail flat and ribbed slabs for given loads.    |
| CO-3 | Design retaining walls and check the stability of the same. |
| CO-4 | Design Different Types Of Water tanks                       |
| CO-5 | Design and evaluate the loads on bridges based on IRC codes |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

### UNIT - I

Introduction to Columns and footings, Definition, IS codes. Elastic design and detailing of combined rectangular footings.

## UNIT - II

Design of Ribbed slabs and Flat slabs: Introduction to ribbed and flat slabs, Analysis of the Slabs for Moment and Shears, Ultimate Moment of Resistance, Design for shear, Deflection, Arrangement of Reinforcements. Flat slabs: IS specifications and general notes on flat slabs Direct design method – Distribution of moments in column strips and middle strip-moment and shear transfer from slabs to columns – Shear in Flat slabs-Check for one way and two way shears – Introduction to Equivalent frame method. Limitations of Direct design method, Distribution of moments in column strips and middle strip.

## UNIT - III

Retaining Walls-the different types of Retaining Walls. Proportioning the retaining walls Determining the Lateral earth pressure on Retaining walls. Perform the Stability checks: overturning, sliding, bearing capacity, and settlement. Elastic design and detailing of retaining walls-cantilever and counter fort types.

## UNIT - IV

Types of water tanks, Definition, IS codes. Elastic design and detailing of rectangular and circular, ground and overhead tanks including Intze tanks. Design of staging.

## UNIT - V

Bridges: Introduction to Bridges, Classification of Bridges, Recent advances in Bridge Engineering IRC loading – impact factor – effective width method and Pigeaud's method. Elastic design and detailing of (i) R.C. Slab bridges and (ii) T-beam bridges for IRC loadings.

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                  |
|----|------------------------------------------------------------------------------------------------------------------|
| 1. | Learn the definition, necessity, types and suitability of different foundation systems.                          |
| 2. | Understand the procedures of Geotechnical design of foundations                                                  |
| 3. | Understand the necessity and usage of different foundation construction related aspects                          |
| 4. | Learn about different methods of geotechnical investigations and its role in selection and design of foundations |
| 5. | Learn the definition, necessity, types and suitability of different foundation systems.                          |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                             |
|------|-----------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Able to compute distribution of increment in vertical stress in ground due to applied loads and apply it to the foundations |
| CO-2 | Competent to analyse and estimate the safe bearing capacity of shallow foundations, to perform settlement analysis          |
| CO-3 | Capable to analyze pile foundations and to estimate the load carrying capacity of single and group of piles.                |
| CO-4 | Knowledgeable about Caissons and Machine foundations and their applications.                                                |
| CO-5 | Learnt about foundation construction aspects and become competent to practice foundation engineering                        |

### Articulation matrix of Course outcomes with PO's:

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

### UNIT - I

**Stress distribution in Soils:** Boussinesq's theory – Computation of increment in vertical stress due to

application of a point load (its distribution on horizontal, vertical planes), uniformly distributed circular and rectangular areas – Pressure bulb – Significant depth - Construction and use of Newmark's chart – Westergaard's theory – Validity of elastic theories – Contact pressure distribution.

## UNIT – II

**Introduction to Foundations:** Functional requirements – types – differentiation of shallow and deep foundations – suitability

**Safe Bearing Capacity of Shallow foundations:** Definitions - (a) Based on theories – types of shear failures – Terzaghi's theory for safe bearing capacity of shallow foundations – Effect of type of shear failure / shape of the footing / water table – Provisions of IS: 6403-1981 (b) Based on field tests : Plate load test / Standard Penetration test.

**Allowable bearing Capacity of Shallow foundations:** Settlement Analysis – Total settlement – Elastic settlement – Consolidation settlement (ultimate & after any given period correction for construction period) – Permissible uniform & differential settlements – Proportioning of footings.

## UNIT - III

**Pile Foundations:** Necessity – types based on load transfer mechanism / material / method of installation / functional use – Estimation of vertical load carrying capacity of a single pile – static formulae / Dynamic formulae / Pile load tests – Cyclic pile load test for separation of total capacity into bearing and friction components – Pile groups – necessity – efficiency of Pile groups - estimation of group capacity – Settlement analysis of individual and group of Piles - Negative Skin friction – Concept of Piled raft foundation.

## UNIT – IV

**Caissons:** Necessity – types – Essential components of open (well) / box (floating) / Pneumatic caissons - suitability – Sinking of caissons – correction for tilt & shift – Scour analysis – Fixing depth of Caisson – Provisions of IS:3955 and IRC:78.

**Machine foundations:** Differentiation with static foundations – vibration characteristics (frequency / amplitude/ resonance) – types of machines and machine foundations – additional design requirements

**Geotechnical Investigations:** Necessity – Principles of exploration - objectives – Soil profile – collection of disturbed & undisturbed soil samples – samplers & quality of samples - methods – Trial pit / Bore hole method – Log of bore hole details

## UNIT – V

**Foundation construction related aspects:**

**Timbered / braced excavations:** Necessity - methods – suitability – distribution of pressure – reaction of struts.

**Dewatering:** Necessity – methods – sumps (ditches) / well point system (single / multi-stage) / deep well system / ejector-osmosis method – merits & demerits – suitability

**Coffer dams:** necessity – types – suitability

**Underpinning:** Necessity – methods (pin / pile) - suitability

**Geosynthetics:** Classification – functions – applications.

### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                                 |
|----|---------------------------------------------------------------------------------|
| 1. | To provide design based on seepage theory for weirs and barrage structures      |
| 2. | To impart knowledge regarding the alluvium principles and silt theory in canals |
| 3. | To describe design aspects of different types of canal regulatory systems       |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                                                       |
|------|-----------------------------------------------------------------------------------------------------------------------|
| CO-1 | Understand the components of diversion head works and design principles of different types of weirs for surface flows |
| CO-2 | Ability to identify the causes of failures and design the floor thickness based on creep theory                       |
| CO-3 | Capability to apply regime theories for design of alluvium canals and ability to design lined canals                  |
| CO-4 | Understand importance, functions and design aspects of canal falls, regulators, escapes, and outlets                  |
| CO-5 | Comprehend various components and design principles of various cross drainage works                                   |

**Correlation rating: Low/ Medium/High: 1/2/3 respectively**

### UNIT-I

Weirs: Components of diversion head works, types of weirs – fixation of still level of head sluice, scouring sluice and crest level of weir, afflux and top level of flood banks, design of vertical drop and sloping glacis weir, design for surface flow and sub - surface flow, length, level and thickness of downstream apron, upstream and downstream cutoffs, protection works.

### UNIT – II

Seepage forces: Causes of failure of structures on permeable foundations, piping, rupture of floor, undermining, remedial measures, computation of uplift forces by Bligh's theory, Khoshla's theory, analytical method, and significance of exit gradient.

### UNIT-III

Canals: Alignment, classification of alluvium canals and their functions, Regime concept of Kennedy's and Lacey's theories, design of canals based on Kennedy's and Lacey's method, use of Garrett's diagrams for the design of canals, lining of canals, methods of lining and design of lined canals.

### UNIT- IV

Canal falls: Definition, location, types of falls, design principles of trapezoidal notch fall, vertical drop fall, glacis fall.

Regulators and modules: Head regulator and cross regulators, canal escapes, canal outlets and modules-proportionality, sensibility and flexibility.

### UNIT- V

Cross drainage works: Definition, classification, design principles of aqueducts, syphon aqueducts, canal syphons, super passages, inlets and outlets-selection of cross drainage works.

### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                                                    |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | Provide common construction practices applicable for paving of subgrade, sub-base and bases courses,                                                               |
| 2. | Understand construction details with equipment used for paving of different types of bituminous and concrete pavement layers                                       |
| 3. | Understand construction details of cement concrete pavements including applicable standards of joints.                                                             |
| 4  | Learn to provide various distresses of pavements based on the functional and structural characteristics.                                                           |
| 5  | Evaluate the condition of pavements through distress condition surveys, load/deflection, analysis of LCCA and apply the principles of pavement management systems. |

**Course Outcomes:**

On completion of this course, the student will be able to:

|      |                                                                                                                                                  |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Develop construction procedures for subgrade, unbound, and bound granular layers with appropriate equipment.                                     |
| CO-2 | Understand construction of different layers of bituminous pavements including their standard specifications.                                     |
| CO-3 | Choose appropriate construction methods with details of cement concrete Pavements.                                                               |
| CO-4 | Evaluate the performance of pavements based on the functional and structural characteristics.                                                    |
| CO-5 | Able to develop basic skills and knowledge regarding principles of pavement management system and prepare life cycle cost analysis of pavements. |

Articulation matrix of Course outcomes with PO's:

[illegible]

**UNIT- I:**

Construction of Subgrade, Base, Subbase, Shoulders, Construction of Gravel Base, Cement Stabilized SubBases, WBM Bases, Wet Mix Construction (WMM); Overview on QC tests.

**UNIT- II:**

Bituminous Construction and Maintenance: Preparation and Laying of Tack Coat; Bituminous Macadam, Penetration Macadam, Built up Spray Grout, Open Graded Premix, Mix Seal, Semi-Dense Asphalt Concrete- IRC Specifications.

**UNIT-III:**

Cement Concrete pavement Construction and Maintenance: Cement Concrete Pavement Analysis – Construction of Cement Roads, Manual and Mechanical Methods, Joints in Concrete - IRC Specifications.

**UNIT- IV:**

Pavement Inventories and Evaluation: Serviceability Concepts; Visual Rating; Pavement Serviceability Index; Roughness Measurements ;Distress Modes – Cracking, Rutting Etc; Pavement Deflection – Falling Weight Deflectometer (FWD), Skid Resistance, Roughness in terms of International Roughness Index (IRI). Causes of Deterioration, Traffic and Environmental Factors, Approaches and Methods of Maintaining WBM, Bitumen and Cement Concrete Roads.

**UNIT- V:**

Pavement management system: Components of PMS and their activities; Major steps in implementing PMS; Inputs; Construction and Maintenance; Rehabilitation and Feedback systems; Life Cycle Cost Analysis (LCCA); Evaluating alternate strategies and Decision criteria ; Pavement Maintenance Management Components of Maintenance Management and Related Activities – Network and Project Level Analysis; Prioritization Techniques and Decision tree.

### Course Objectives:

The course is taught with the objectives of enabling the student

|    |                                                                                  |
|----|----------------------------------------------------------------------------------|
| 1. | Understand the basic concept of prestressed concrete and materials used.         |
| 2. | Learn the analysis prestress and load balancing concept.                         |
| 3. | Study the flexural and shear design of prestressed concrete beam sections.       |
| 4. | Know the concepts of deflections and end blocks of prestressed concrete sections |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                 |
|------|---------------------------------------------------------------------------------|
| CO-1 | Apply the concept of prestressing and determine the losses of prestress.        |
| CO-2 | Analyze the prestressed concrete beam and suggest the cable profile for beam.   |
| CO-3 | Design the prestressed concrete beam for flexure and shear.                     |
| CO-4 | Analyze the prestressed continuous beam and determine concordant cable profile. |
| CO-5 | Estimate the deflection of a prestressed concrete beam and design the end block |

## UNIT - I

**Introduction to prestressed concrete:** Concept of prestressing, historical development, definitions, advantages, applications, materials, prestressing systems.

**Loss of prestress:** Losses of prestress in pre-tensioned and post-tensioned members.

## UNIT - II

**Analysis of prestress:** Basic assumptions, analysis of prestress, resultant stress, pressure line, kern points, cable profiles, load balancing concept, stress diagrams for prestress, dead load and live load.

## UNIT - III

**Simply supported continuous beams:** Concordant cable profile, analysis of continuous prestressed concrete beams.

**Design for flexure:** Flexural strength design of rectangular, I and T sections using IS code provisions.

## UNIT - IV

**Design for shear:** Shear and principal stresses, shear resistance of a PSC beam, design of shear reinforcement.

**Design for torsion:** Design of a PSC beam for torsion, shear and bending.

## UNIT - V

**Deflections:** Importance of deflections, factors influencing deflections, codal provisions, short term and long term deflections. Deflections of simply supported beams with uniformly distributed and point loads.

**Transmission length and Anchorage zone:** Design of a transmission zone in pre-tensioned members and design of anchorage zone in post-tensioned members by IS method.

### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                                                        |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | To understand the objectives, necessity and scope of ground improvement techniques                                                                                     |
| 2. | To learn different methods of in situ densification of cohesive, cohesionless soils                                                                                    |
| 3. | To learn the classification, functions and applications of Geosynthetics in ground improvement                                                                         |
| 4. | To learn the process of identification of necessity for ground improvement, finding alternative methods and recommendation of the ideal technique through case studies |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                                                                                                                          |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Ability to understand the necessity of ground improvement and evaluation of potential of a ground for improvement                                                                        |
| CO-2 | Comprehensive understanding about the improvement of in-situ cohesive soils as well as Cohesion less soils                                                                               |
| CO-3 | Knowledge of Grouting & other soil stabilization methods and competence to apply them for ground improvement                                                                             |
| CO-4 | Ability to understand and implement the Geosynthetic applications                                                                                                                        |
| CO-5 | Competence to analyse an in-situ ground, identification of ground improvement techniques feasible, selection of the ideal method, its implementation and evaluation of improvement level |

**Correlation rating: Low/ Medium/High: 1/2/3 respectively**

## UNIT - I

**Introduction :** Objectives and necessity of Ground Improvement – Formation of Rock and soils – Alteration of ground after its formation – Reclaimed soils – Types and distribution of Soils in India - marine, black cotton soils (expansive), lateritic, alluvial, desert, peaty Soils etc - Ground improvement potential – Geotechnical processes.

## UNIT - II

**Surface Compaction methods:** Compaction Mechanism - moisture density relationship – Factors affecting compaction – Laboratory evaluation of Compaction Characteristics – Field Surface Compaction Methods – Compaction procedure – Specification – Quality Control aspects.

**In-situ Densification of Cohesionless Soils:** Necessity for Deep compaction – Vibration methods – Vibro-compaction methods (Blasting, Vibratory probe, Dynamic compaction / heavy tamping), Vibro-displacement Methods (Displacement Piles, Sand Compaction Piles), vibro-replacement cum displacement methods (Vibro-floatation, Stone Columns).

## UNIT - III

### **In-situ Densification of Cohesive Soils:**

Drainage methods – Methods of dewatering systems - selection of pumps and accessories

Pre-compression methods – Concept & benefit of pre-compression -consolidation of Clayey soils – Pre-loading technique – consolidation acceleration methods - consolidation aided with vertical drains – Sand Drains - Pre-fabricated vertical drains, Consolidation by Electro- osmosis and vacuum compression methods - Compression monitoring.

## UNIT - IV

**Grouting:** Aspects of grouting – Types of grout materials – Classification based on Groutability Ratio - grouting procedure – Applications of grouting in ground improvement.

**Soil Stabilisation:** Types and suitability of stabilization methods - Mechanical, Cementing methods – Aggregants and dispersants – Stabilization procedure – quality control in Soil Stabilization.

## UNIT - V

**Geo-Synthetics:** Classification of Geosynthetics – Functions and applications – Concept of design by function.

**Reinforced Soil Walls** – Components of a RSW – Types of facia – Types of Reinforcement & factors influencing the selection - Design of RSW – construction procedure - Gabions.

### Course Objectives:

The course is taught with the objectives of enabling the student

|    |                                                                                   |
|----|-----------------------------------------------------------------------------------|
| 1. | Introduction to basic concepts of General Circulation Models and their importance |
| 2. | Features of Indian summer monsoon rainfall (ISMR) and their characteristics       |
| 3. | Downscaling principles of statistical downscaling and dynamical downscaling       |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                                             |
|------|-------------------------------------------------------------------------------------------------------------|
| CO-1 | Understanding of various components of Climate System, Vertical structure of Atmosphere and temperature.    |
| CO-2 | Comprehensive Understanding of water balance, distribution of precipitation                                 |
| CO-3 | Ability to comprehend the monsoon wind patterns, ISMR characteristics, floods and droughts.                 |
| CO-4 | Analysis and synthesis on the causes of climate change on hydrology using General Circulation Models (GCMs) |
| CO-5 | Modeling of climate variables using various downscaling approaches and Applications of Hydrologic models    |

Correlation rating: Low/ Medium/High:1/2/3respectively.

## UNIT-I

Climate System- Weather and Climate- Overview of earth system- Atmosphere- Biosphere- Lithosphere- General Circulation of the atmosphere- Modeling of hydrological Systems- vertical structure of atmosphere- Solar Radiation and Temperature- Temperature variation- vertical variation in Air temperature- temperature extremes.

## UNIT-II

Introduction- Global water balance- cycling of water on land- simple water balance- climate variables affecting precipitation- forms and types of precipitation. Climate Classification - Storms and Hurricanes- Global Ocean Circulation – El Nino and its Effect -

## UNIT – III

Monsoon- wind patterns - Global Wind Systems – Trade Winds and the Hadley Cell – The Westerlies - Cloud Formation and Monsoon Rains –clouds- Types of clouds-Indian summer monsoon Rainfall (ISMR) - characteristics- climate variability- Floods- droughts- drought Indicators - climate extremes.

## UNIT – IV

Causes of climate change - Observation of Climate Change – Changes in patterns of temperature, precipitation and sea level rise – Observed effects of Climate Changes – Patterns of Large Scale Variability – Drivers of Climate Change – Changes in Extreme Events – UNFCCC – IPCC -Modeling of climate change-General circulation models (GCMs) –IPCC scenarios - IPCC Assessment Report (AR5) - Physical Science basis.

## UNIT-V

CMIP Data Downloading- Bias correction methods -Downscaling – Types of downscaling- Dynamical downscaling-Regional Climate Models - statistical downscaling - Types of statistical downscaling - climate predictors - data reduction techniques -principal component analysis- step wise regression- Lasso- - Kernel Regression - SDSM software - Hydrology models - Introduction on Soil and water assessment tool SWAT and VIC (variable Infiltration capacity models).

#### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                             |
|----|-----------------------------------------------------------------------------|
| 1. | To understand basics related to alignment of Railway lines                  |
| 2. | To know the various track components                                        |
| 3. | To know the elements of geometric design of track                           |
| 4. | To know the functions and requirements of various elements of Permanent way |
| 5. | To understand the various methods of signaling interlocking methods         |

#### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                      |
|------|--------------------------------------------------------------------------------------|
| CO-1 | Understand general features and alignment of railway lines                           |
| CO-2 | Understand the concepts related to rails, sleepers, track and track stresses         |
| CO-3 | Able to design the geometrics of railway track                                       |
| CO-4 | Understand the concepts related to sub grade, formation and ballast                  |
| CO-5 | Understand the concepts related to points and crossings with modern signaling system |

**Correlation rating: Low/ Medium/High: 1/2/3 respectively**

#### UNIT-I

General Features and Alignment of Railway Lines: Development in Indian railways, Organization of Indian Railways, Classification of railway lines, General features of Indian railways, important statistics. Alignment of railway lines: Good Alignment, basic requirements of an Ideal alignment, selection of good alignment, Railway track Gauge: Gauges on World and Indian Railways, Engineering surveys and construction of new lines.

## UNIT-II

Rails, Sleepers, Track and Track Stresses: Requirements of good track, Maintenance of permanent way, Coning of wheels, Tilting of rails. Rails: functions and types, requirements for an ideal rail section, rail manufacture, rail wear, defects in rails and rail flaw detection. Creep: causes, effects of creep, measurement of creep, adjustment of creep. Sleepers: functions and requirements, sleeper density and spacing of sleepers, types of sleepers.

## UNIT-III

Geometric Design of Track; Necessity of Geometric design, details of geometric design of track, Gradients and grade compensation on curves, Super elevation, transition curve, reverse curve, extra clearance of curves, widening of gauge on curves, vertical curves, cutting rails on curves, check rails on curves.

## UNIT-IV

Sub grade Formation and Ballast; Slopes of formation, execution of earthwork in embankments and cuttings, Blanket and blanketing Material, Failure of railway embankment, site investigations. Ballast: functions, types, sizes of ballast, requirement of good ballast, design of ballast section, collection and transportation of ballast, methods of measurement, laboratory tests for physical properties of ballast. Guidelines for provision of sub ballast, Track Drainage.

## UNIT – V

Points and Crossings, Signaling and Interlocking: Important terms, Switches, Design of Tongue rails, Turnouts: layout of turnout, trends in turnout design on Indian Railways, inspection and maintenance of points and crossings. Level crossing: Classification, dimensions, Accidents at level crossing and remedial measures, maintenance and inspection. Signaling and interlocking: Objectives, classification, signaling systems, systems for controlling train movement, interlocking, modern signaling installations.

### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                              |
|----|----------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | Learn concepts of finite element method and potential-energy approach.                                                                       |
| 2. | Study 1-D analysis using 2-node axial bar element with application problems.                                                                 |
| 3. | Learn 2-D analysis using 3-node triangular element and 4-node quadrilateral with application problems.                                       |
| 4. | Study 3-D analysis using 3-node triangular ring element, 4-node Tetrahedron element and 8-node hexahedron element with application problems. |
|    | Apply FEM concepts to Civil Engineering problems such as 2-D plane trusses, beams and 2-D plane frames using appropriate elements.           |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                                                     |
|------|---------------------------------------------------------------------------------------------------------------------|
| CO-1 | Answer problems of finite element method and potential-energy approach.                                             |
| CO-2 | Solve 1-D problems using 2-node axial bar element.                                                                  |
| CO-3 | Work out 2-D problems using 3-node triangular element and 4-node quadrilateral.                                     |
| CO-4 | Answer 3-D problems using 3-node triangular ring element, 4-node Tetrahedron element and 8-node hexahedron element. |
| CO-5 | Solve Civil Engineering problems such as 2-D plane trusses, beams and 2-D plane frames.                             |

**Correlation rating: Low/ Medium/High: 1/2/3 respectively**

### UNIT - I

**Introduction to FEM:** Types of problems – Types of materials – Elastic / inelastic situations – Types of forces - Body forces / Surface Traction / Point loads – Types of deformations – Homogeneous / Non homogeneous problems – Equations of equilibrium for elastic 2-D / 3-D continua - Equilibrium equations for 2-D / 3-D boundary elements – Boundary conditions – Strain-displacement relation - Stress-strain relation for 2-D / 3-D problems – Plane stress / Plane strain problems – Initial strain -

Displacement model - Criterion for convergence - Conforming and non-conforming elements – Subparametric / Superparametric / Isoparametric formulations.

**Potential-Energy / Variational Approach:** Rayleigh-Ritz Method – Galerkin's Method – Application to discrete connected system and 1-D axial bar.

## UNIT - II

1-D Bar Elements: 1-D 2-node axial bar element - Finite element modeling – Natural coordinates - Shape functions – Strain-displacement relation matrix - Potential-energy approach - Stiffness matrix – Body force

vector – Traction force vector – Assembly of global stiffness matrix and load vector – Finite element equations – Treatment of boundary conditions – Elimination approach – Penalty approach – Multipoint constraints – Temperature effects – Application problems.

## UNIT III

2-D Triangular Elements: 2-D 3-node triangular element - CST - Shape functions – Area coordinates - Isoparametric formulations - Strain-displacement matrix – Potential-energy approach - Stiffness matrix – Body force vector – Traction force vector - Temperature effects – Application problems.

2-D Isoparametric Quadrilateral Elements: 2-D 4-node quadrilateral - Shape functions – Jacobian matrix - Strain-displacement matrix - Potential-energy approach - Stiffness matrix – Body force vector – Traction force vector – Numerical integration - Gaussian quadrature – 1-D and 2-D integrals - Application problems.

## UNIT - IV

3-D Axisymmetric Problems: Axisymmetric formulation - Finite element modeling - 3-node triangular ring element - Strain-displacement matrix - Potential-energy approach - Stiffness matrix – Body force vector – Traction force vector - Temperature effects – Application problems.

3-D Tetrahedron / Hexahedron Elements: Finite element formulation – 3-D 4-node Tetrahedron element - 3-D 8-node hexahedron / brick element - Shape functions – Volume coordinates - Jacobian matrix - Strain-displacement matrix - Potential-energy approach - Stiffness matrix – Body force vector – Traction force vector – Application problems.

## UNIT - V

Civil Engineering Problems:

2-D Trusses: 2-D Plane Truss – Local and global coordinate systems – Transformation matrix – Potential-Energy approach - Stiffness matrix – Strain-displacement matrix - Stress – Temperature effects – Application problems.

Beams: Finite element formulation - Hermite shape functions – Potential-energy approach - Stiffness matrix – Load vector – Shear force – Bending moment – Reaction – Application problems.

2-D Plane Frames: 2-D Plane frame element – Local-global transformation matrix – Potential-energy approach - Stiffness matrix – Load vector – Application problems.

### Course Objectives:

The course is taught with the objectives of enabling the student to:

|    |                                                                            |
|----|----------------------------------------------------------------------------|
| 1. | To understand complexity of Deep Learning algorithms and their limitations |
| 2. | To understand complexity of Deep Learning algorithms and their limitations |
| 3. | To apply Deep Learning algorithms in practical applications                |
| 4. | To perform experiments in Deep Learning using real-world data              |

### Course Outcomes:

On completion of this course, the student will be able to:

|      |                                                                                                                         |
|------|-------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Understand the concepts of Neural Networks, its main functions, operations and the execution pipeline                   |
| CO-2 | Implement deep learning algorithms, understand neural networks and traverse the layers of data abstraction..            |
| CO-3 | Learn topics such as Convolutional neural networks, recurrent neural networks, training deep networks and modifications |
| CO-4 | Build deep learning models in PyTorch and interpret the results                                                         |

### UNIT-I

**Artificial Neural Networks:** Introduction, Perceptron, XOR Gate ,Perceptron Training Rule, Activation Functions.

**Linear Neural Networks:** Linear Regression, Implementation of Linear Regression, Softmax Regression, The Image Classification Dataset , Implementation of Softmax Regression.

### UNIT-II

#### Multilayer Perceptrons:

Multilayer Perceptrons, Implementation of Multilayer Perceptrons, Model Selection, Underfitting and Overfitting, Weight Decay, Dropout, Forward Propagation, Backward Propagation, and Computational Graphs, Numerical Stability and Initialization, Considering the Environment, Predicting House Prices on Kaggle.

**Optimization Algorithms:** Optimization and Deep Learning, Convexity, Gradient Descent, Stochastic Gradient Descent, Mini batch Stochastic Gradient Descent, Momentum, Adagrad, RMS Prop, Ada delta, Adam, Learning Rate Scheduling.

### UNIT-III

#### **Introduction to Convolutional Neural Networks**

Introduction to CNNs, Kernel filter, Principles behind CNNs, Multiple Filters, **Modern Convolutional Neural Networks**

Deep Convolutional Neural Networks (AlexNet), Networks Using Blocks (VGG), Network in Network (NiN), Networks with Parallel Concatenations (GoogLeNet), Batch Normalization, Residual Networks (ResNet), Densely Connected Networks (DenseNet).

### UNIT-IV

**Recurrent Neural Networks:** Sequence Models, Text Preprocessing, Language Models and the Dataset, Recurrent Neural Networks, Implementation of Recurrent Neural Networks from Scratch, Concise Implementation of Recurrent Neural Networks, Back propagation Through Time.

**Modern Recurrent Neural Networks:** Gated Recurrent Units (GRU), Long Short Term Memory (LST), Deep Recurrent Neural Networks, Bidirectional Recurrent Neural Networks, Machine Translation and the Dataset-Encoder-Decoder Architecture, Sequence to Sequence, Beam Search.

### UNIT-V

**Auto Encoders:** Types of Auto Encoders and its applications- **Generative Adversarial Networks:** Generative Adversarial Network, Deep Convolutional Generative Adversarial Networks

#### **Suggested Readings:**

### Course Objectives :

The course is taught with the objectives of enabling the student to:

- |    |                                                                                             |
|----|---------------------------------------------------------------------------------------------|
| 1. | To make the students gain basic knowledge of Human Physiology.                              |
| 2. | To make the students learn the applications of various branches of engineering in Medicine. |

### Course Outcomes :

On completion of this course, the student will be able to :

- |      |                                                                                  |
|------|----------------------------------------------------------------------------------|
| CO-1 | Describe the major organ systems of the human body                               |
| CO-2 | Understand the concepts of bioelectricity and medical instruments                |
| CO-3 | Apply solid and fluid mechanics principles to joints and blood flow respectively |
| CO-4 | Learn the need and applications of BCI.                                          |
| CO-5 | Analyze and choose proper biomaterial for various applications                   |

### UNIT-I

Evolution of Modern healthcare, Major organ systems- Cardiovascular, Respiratory, Nervous, Skeletal, Muscular. Homeostasis. Physiological signals and their diagnostic importance.

### UNIT-II

Bioelectricity-Excitable cells, Resting potential, Action potential, Accommodation, Strength-Duration Curve, Propagation of impulses in myelinated and unmyelinated nerves. Medical Instrumentation System-Functions, Characteristics, Design Challenges. Signal Processing-QRS detection.

### UNIT-III

Solid mechanics-Analysis of muscle force and joint reaction force for the limb joints. Fluid mechanics-Factors governing and opposing blood flow, Wind-Kessel model, Application of Hagen-Poiseuille flow to blood flow.

### UNIT-IV

Brain-Computer Interface: Brain signals for BCIs, Generic setup for a BCI, Feature extraction and Feature translation involved in BCIs. Typical applications-Word forming, Device control.

## UNIT-V

Materials and Tissue Replacements-Types of Biomaterials- Metals, Polymers, Ceramics and Composites and their applications in Soft and Hard tissue replacements. Implants- Manufacturing process, Design, fixation.

| Evaluation     | SEE                          | 60 Marks | CIE |   | 40 Marks |   |

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                                              |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | To extend knowledge of the amputee, of lost and remaining functions affecting locomotion, and to collect information on the best possible medical treatment. |
| 2. | To improve fitting techniques and practices, including training, so that existing devices might be used with greater comfort and function.                   |
| 3  | To develop improved lower-extremity devices.                                                                                                                 |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                        |
|------|----------------------------------------------------------------------------------------|
| CO-1 | Apply fundamental knowledge of engineering in rehabilitation                           |
| CO-2 | Apply analytical skills to assess and evaluate the need of the end-user                |
| CO-3 | Develop self-learning initiatives and integrate learned knowledge for problem solving  |
| CO-4 | Understand the basics of robotics and apply their principles in developing prosthetics |
| CO-5 | Apply the knowledge of computers in solving rehabilitation problems                    |

### UNIT- I

Introduction to Rehabilitation Engineering, Definition of Rehabilitation Engineering, Scope and importance of the field, Historical perspective. Interdisciplinary nature and collaboration with healthcare professionals. Physical disabilities: mobility impairments, spinal cord injuries. Cognitive disabilities: learning disabilities, traumatic brain injuries. Psychosocial aspects of disability.

### UNIT-II

Assistive Technology, Human Factors and Ergonomics in Assistive Technology Design. Mobility Aids, Types of Wheelchairs and design aspects: Manual wheelchairs, Powered wheelchairs, Customizable features and design considerations, Auxiliary devices and systems. Human-Centered Designing.

### UNIT – III

Sensory disabilities: visual and hearing impairments. Sensory augmentation and substitution: Visual system: Visual augmentation. Tactual vision substitution, Auditory vision substitution; Auditory system: Auditory augmentation. Cochlear implantation, Visual auditory substitution, Tactual auditory substitution, Tactual system: Tactual augmentation. Tactual substitution. Assessment and Outcome Measurement

#### UNIT-IV

Rehabilitation Robotics, Exoskeletons, Major Limb Prosthetic Devices, Orthotic Devices, Types of orthotics and prosthetics, Intelligent prosthetic Knee, Prosthetic Hand, Controlled orthotics and prosthetics Materials and fabrication techniques, Functional and cosmetic considerations. FES system, Restoration of Hand function, Restoration of standing and walking, Myo-electric Hand.

#### UNIT-V

Case Studies and Real-World Applications. Augmentative and Alternative communications, Software tools for simulation and testing. Virtual reality applications in rehabilitation. Machine learning applications in assistive technology. Predictive analytics for personalized rehabilitation

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                                                      |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | To introduce basic conceptual understanding of natural & man-made hazards and different contextual aspects.                                                          |
| 2. | To develop the knowledge and understanding of the International and national strategy for disaster reduction (UN-ISDR)                                               |
| 3. | To ensure skills and abilities to analyze potential effects of disasters and of the strategies and methods to deliver public health response to avert these effects. |
| 4. | To promote the use of science and technology for implementing the disaster risk reduction (DRR) plans and policies.                                                  |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                                                                                             |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Aptitude to link hazards, risk, vulnerability, differential impacts and capacity building to the life and property loss during disasters and its impacts on the society and sustainability. |
| CO-2 | Ability to understand various aspects of natural and man-made hazards and emerging trends                                                                                                   |
| CO-3 | Acquaintance with different steps involved in disaster risk reduction (DRR) and international initiatives for prevention, mitigation and preparedness.                                      |
| CO-4 | Knack to appreciate the National Policy and Role of individuals, communities, and government organizations in disaster management.                                                          |
| CO-5 | Capacity to identifying current technological constraints and hazard specific solutions, particularly construction codes etc.                                                               |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

## **UNIT I: INTRODUCTION TO DISASTER**

Understanding the Concepts, Definitions and Terminologies used in the field of Disaster Management (i.e. Hazard, Risk, Vulnerability, Resilience, and Capacity Building); Differential impacts of Disasters in terms of Gender, Age, Social Status, Location, Prosperity, Disabilities; Disaster- Development Nexus.

## **UNIT II: TYPES of HAZARDS AND EMRGING TRENDS**

Classification, Causes, Consequences and Controls of: Geophysical hazards-Earthquakes, Landslides, Tsunami; Weather related hazards- Meteorological (Cyclones, and Storm- surge), Hydrological (Floods, Droughts, Avalanches), Climatological (Wildfire, Cold & Heat Waves); Biological hazards-Epidemic & Pandemics; Technological hazards- Chemical, Industrial, Nuclear; Man-made hazards-Structural Failure, Fire, Transportation accidents, Terrorism and Wars; Emerging Disasters- Urban Areas, Climate Change; Regional and Global Trends-loss of life & Property in various hazards

## **UNIT-III: DISASTER MANAGEMENT CYCLE AND INTERNATIONAL FRAMEWORK**

Disaster Management Cycle: Pre-Disaster – Risk Assessment and Analysis, Risk Mapping, zonation and Micro-zonation, Prevention and Mitigation of Disasters, Early Warning System; Preparedness, Capacity Building; Awareness; During Disaster – Evacuation – Disaster Communication – Search and Rescue– Emergency Operation Centre – Incident Command System – Relief and Rehabilitation; Post-disaster – Damage and Needs Assessment, Restoration of Critical Infrastructure – Early Recovery– Reconstruction and Redevelopment; Paradigm Shift in Disaster Management: International Decade for Natural Disaster Reduction; Yokohama Strategy; Hyogo Framework of Action

## **UNIT IV: DISASTER RISK MANAGEMENT IN INDIA**

Disaster Profile of India – Mega Disasters of India and Lessons Learnt; Disaster Management Act 2005 – Institutional and Financial Mechanism; National Policy on Disaster Management; National Guidelines and Plans on Disaster Management; Role of Government (local, state and national), Non-Government and Inter-governmental Agencies

## **UNIT V: TECHNOLOGICAL APPROACHES TO DISASTER RISK REDUCTION**

Geo-informatics in Disaster Management (RS, GIS, GPS and RS); Technological in Disaster Communication System (Early Warning and Its Dissemination), rescue and restoration of services; Disaster Safe Designs and Constructions; Application of technology and innovations for Structural and Non Structural Mitigation; Science & Technology Institutions for Disaster Management in India

| Evaluation     | SEE         | 60Marks                 | CIE | 40Marks |   |

### Course Objectives:

The course is taught with the objectives of enabling the student to:

- |   |                                                                                          |
|---|------------------------------------------------------------------------------------------|
| 1 | To introduce the fundamentals of road safety and road safety audit                       |
| 2 | To get familiarized with various road safety techniques, measures and their applications |
| 3 | To be able to understand and evaluate various traffic control devices                    |
| 4 | Familiarize with traffic management techniques                                           |
| 5 | To examine and analyze the incident management process                                   |

### Course Outcomes :

On completion of this course, the student will be able to:

|      |                                                        |
|------|--------------------------------------------------------|
| CO-1 | Analyze Accident data                                  |
| CO-2 | Plan and design of road safety improvement programs    |
| CO-3 | Apply the principles of road safety in urban transport |
| CO-4 | Apply traffic management techniques                    |
| CO-5 | Able to plan effective incident management program     |

Correlation rating: Low/ Medium/High:1/2/3 respectively

### UNIT-I

Road accidents: Causes, scientific investigations and data collection, analysis of individual accidents to arrive at real causes, statistical methods of analysis of accident data, Basic concepts of road accident statistics, safety performance function: The empirical Bayes method identification of hazards road location. Application of computer analysis of accident data.

### UNIT-II

**Safety in Road Design:** Operating the road network for safety, highway operation and counter measures, road safety audit, principles-procedures and practice, code of good practice and checklists, vehicle design factors & driver characteristics influencing road safety

### UNIT-III

**Road Signs and Traffic Signals:** Classification, Location of signs, measures of sign effectiveness, Types of visual perception, sign regulations, sign visibility, sign variables, Text versus symbols, Road marking: Role of road marking, classification, visibility. Traffic signals: Need, Signal face illumination and location of signals, factors affecting signal design, pedestrian's safety, fixed and vehicle actuated signals. Design of signals, area traffic control, Delineators, traffic impact attenuators, road side rest areas, safety barriers, traffic aid posts

### UNIT IV

**Traffic Management Techniques:** Integrated safety improvement and traffic calming schemes, speed and load limit, traffic lights, safety cameras, tests on driver and vehicles, pedestrian safety issues, parking, parking enforcement and its influence on accidents, travel demand management, methods of traffic management measures: restriction of turning movements, One way streets, tidal flow operation methods, exclusive bus lanes and closing side-streets; latest tools and techniques used for road safety; legislation, enforcement, education and propaganda.

### UNIT-V

**Incident Management:** Introduction, characteristics of traffic incidents types of incidents, impacts, incident management process, incident traffic management; application of ITS: Motorist information, equipment used; planning effective incident management program, best practice in incident management programs. National importance of survival of transpiration systems during and after all natural disasters especially cyclones, earthquakes, floods etc and manmade disasters like sabotage, terrorism etc.

### Course Objectives:

1. To know the basics of Programming
2. To convert an algorithm into a Python program
3. To construct Python programs with control structures.
4. To structure a Python Program as a set of functions
5. To use Python data structures-lists, tuples, dictionaries.
6. To do input/output with files in Python.
7. To construct Python programs as a set of objects.

### Course Outcomes:

1. Develop algorithmic solutions to simple computational problems.
2. Develop and execute simple Python programs.
3. Develop simple Python programs for solving problems.
4. Structure a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs

### UNIT-I

**Introduction to Computing and Problem Solving:** Fundamentals of Computing – Computing Devices – Identification of Computational Problems – Pseudo Code and Flowcharts – Instructions – Algorithms – Building Blocks of Algorithms.

**Introduction to Python Programming:** Python Interpreter and Interactive Mode– Variables and Identifiers – Arithmetic Operators – Values and Types – Statements, Reading Input, Print Output, Type Conversions, The type() Function and Is Operator, Dynamic and Strongly Typed Language.

**Control Flow Statements:** The if, The if...else, The if...elif...else Decision Control Statements, Nested if Statement, The while Loop, The for Loop, The continue and break Statements.

## UNIT-II

**Functions:** Built-In Functions, Commonly Used Modules, Function Definition and Calling the Function, The return Statement and void Function, Scope and Lifetime of Variables, Default Parameters, Keyword Arguments, Command Line Arguments.

**Strings:** Creating and Storing Strings, Basic String Operations, Accessing Characters in String by Index Number, String Slicing and Joining, String Methods, Formatting Strings.

**Lists:** list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; **Tuples:** tuple assignment, tuple as return value; **Dictionaries:** operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

## UNIT-III

**Files and Exception:** Text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

**Strings:** Basic String Operations, String Slicing, Testing, Searching, and Manipulating Strings

**Dictionaries and Sets:** Dictionaries, Sets, Serializing Objects.

## UNIT-IV

**Object-Oriented Programming:** Classes and Objects, Creating Classes in Python, Creating Objects in Python, The Constructor Method, Classes with Multiple Objects, Class Attributes versus Data Attributes, Encapsulation, Inheritance The Polymorphism.

**Functional Programming:** Lambda. Iterators, Generators, List Comprehensions.

## UNIT-V

**GUI Programming:** Graphical User Interfaces, Using the tkinter Module, Display text with Label Widgets, Organizing Widgets with Frames, Button Widgets and Info Dialog Boxes, Getting Input with Entry Widget, Using Labels as Output Fields, Radio Buttons, Check Buttons.

### Course Objectives:

- Learn the various threats in networks and security concepts.
- Apply authentication applications in different networks.
- Understand security services for email.
- Awareness of firewall and IT laws and policies.

### Course Outcomes:

1. Understand the various network threats
2. Analyze the forensic tools for evidence collection
3. Apply the firewalls for threat analysis

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively

### UNIT-I

Ethical hacking, Attack Vectors, Cyberspace and Criminal Behaviour, Clarification of Terms, Traditional Problems associated with Computer Crimes, Realms of Cyber world, brief history of the internet, contaminants and destruction of data, unauthorized access, computer intrusions, white-collar crimes, viruses and malicious code, virus attacks, pornography, software piracy, mail bombs, exploitation, stalking and obscenity in internet, Cyber psychology, Social Engineering.

### UNIT-II

Introduction to Digital forensics, Forensic software and handling, forensic hardware and handling, analysis and advanced tools, forensic technology and practices, Biometrics: face, iris and fingerprint recognition, Audio-video evidence collection, Preservation and Forensic Analysis.

### UNIT-III

Investigation Tools, e-discovery, EDRM Models, digital evidence collection and preservation, email investigation, email tracking, IP tracking, email recovery, search and seizure of computer systems, password cracking.

### UNIT-IV

Forensic Analysis of OS artifact, Internet Artifacts, File System Artifacts, Registry Artifacts,

Application Artifacts, Report Writing, Mobile Forensic- identification, collection and preservation of mobile evidences, social media analysis, data retrieval, Email analysis from mobile phones.

#### **UNIT-V**

##### **Ethics, Policies and IT Act**

Basics of Law and Technology, Introduction to Indian Laws, Scope and Jurisprudence, Digital Signatures, E Commerce-an Introduction, possible crime scenarios, law coverage, data interchange, mobile communication development, smart card and expert systems Indian Laws, Information Technology Act 2000, Indian Evidence Act, India Technology Amendment Act 2008, Indian Penal Code , Computer Security Act 1987, National Information Infrastructure Protection Act 1996, Fraud Act 1997, Children Online Protection Act 1998, Computer Fraud and Abuse Act 2001, Intellectual Property, IP Theft, Copyright, Trademark, Privacy and Censorship, Introduction to Cyber Ethics, rights over intellectual property, Corporate IT Policy Formulations, Compliance Auditing.

| Evaluation     | SEE         | 60 Marks | CIE |   | 40 Marks |   |

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                          |
|----|--------------------------------------------------------------------------------------------------------------------------|
| 1. | To familiarize with various modeling styles: structural, dataflow and behavioral of Verilog HDL                          |
| 2. | To develop combinational and sequential circuits using various modeling styles of Verilog HDL                            |
| 3  | To design and develop Verilog HDL models of data path and control units of Central Processing Unit (CPU)                 |
| 4  | To learn Synthesis and FPGA design flow.                                                                                 |
| 5  | To design and develop real time applications: Booth,,s multiplier, Divider, hardwired control for basic CPU, FIR filter. |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                         |
|------|---------------------------------------------------------------------------------------------------------|
| CO-1 | Implement and distinguish different Verilog HDL modeling styles                                         |
| CO-2 | Construct and analyze Verilog HDL models of combinational and sequential circuits                       |
| CO-3 | Design and develop Verilog HDL modeling and test bench for digital systems for the given specifications |
| CO-4 | Outline FPGA design flow and timing analysis                                                            |
| CO-5 | Understand implementation of real time applications                                                     |

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

## UNIT - I

*Introduction to HDL:* Overview and Importance of HDLs, Differences between HLL, HDL and ALP. Design methodologies, Modules, Lexical Conventions, Number Specifications, Strings, Identifiers and Keywords Data types, System task and compiler Directives, Port declaration and port connection rules

## UNIT-II

*Structural and Dataflow modeling:* gate-level modeling, delays, hazards, dataflow modeling: Continuous Assignments, Delays, Expressions, Operators and Operands, Operator Types and Design Examples.

## UNIT – III

*Behavioral Modeling:* Structured Procedures, Procedural Assignments, Timing Controls, Conditional Statements, multi-way branching, Loops, Sequential and Parallel blocks, Generate blocks. Combinational, sequential logic modules Simulation: Types of Simulation, Event driven Simulation and Cycle Based Simulation; design examples.

## UNIT-IV

*Synthesis and Verification:* Tasks and Functions: Differences between Tasks and Functions, Tasks and Functions. Verilog HDL synthesis, synthesis, Application Specific IC (ASIC) and Field Programmable Gate Array (FPGA) design flow. Verification: Timing analysis and Test bench design. Design examples.

## UNIT-V

*Real time implementations:* Fixed-Point Arithmetic modules: Addition, Multiplication, Division, Arithmetic and Logic Unit (ALU), Timer, Universal Asynchronous Receiver and Transmitter (UART), DSP modules: FIR and IIR filters, CPU design: Data path and control units

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                                       |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | Provide an introduction to fundamental concepts in the understanding of Electronic communications systems                                             |
| 2. | Provide an introduction to network model and some of the network layers including physical layer, data link layer, network layer and transport layer. |
| 3. | Provide an introduction to the evolution of wireless systems and current wireless technologies.                                                       |
| 4. | Provide an introduction to fundamental concepts in the understanding of Telecommunication and optical communications systems                          |
| 5. | Provide an introduction to fundamental concepts in Analog and Digital Communications                                                                  |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                                     |
|------|-------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Understand the working of analog and digital communication systems                                                                  |
| CO-2 | Understand the OSI network model and the working of data transmission                                                               |
| CO-3 | Understand the concepts of modulation and demodulations                                                                             |
| CO-4 | Understand the evolution of communication technologies from traditional telephony systems to modern wireless communication systems. |
| CO-5 | Understand the principles of optical communications systems                                                                         |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

## UNIT- I

**Introduction to communication systems:** Electromagnetic Frequency Spectrum, Signal and its representation, Elements of Electronic Communications System, Types of Communication Channels, Signal Transmission Concepts-Baseband transmission and Broadband transmission, Communication parameters- Transmitted power, Channel bandwidth and Noise, Need for modulation Signal Radiation and Propagation- Principle of electromagnetic radiation, Types of Antennas, Antenna Parameters and Mechanisms of Propagation.

## UNIT- II

**Analog and Digital Communications:** Amplitude modulation and demodulation, FM modulation and demodulation, Digital converters, Digital modulation schemes – ASK, FSK, PSK, QPSK, Digital demodulation.

## UNIT- III

**Data Communication and Networking:** Network Models, OSI Model, Data Link Layer – Media Access control, Ethernet, Network Layer – Internet Protocol (IPv4/IPv6), Transport Layer – TCP, UDP.

## UNIT- IV

**Telecommunication Systems:** Telephones, Telephone system, Paging systems, Internet Telephony. Optical Communications: Optical Principles, Optical Communication Systems, Fiber –Optic Cables, Optical Transmitters & Receivers, Wavelength Division Multiplexing.

## UNIT- V

**Wireless Communications:** Evolution of Wireless Systems: AMPS, GSM, CDMA, WCDMA, And OFDM. Current Wireless Technologies: Wireless LAN, Bluetooth, PAN and ZigBee, Infrared wireless, RFID communication, UWB, Wireless mesh networks, Vehicular adhoc networks.

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                             |
|----|-----------------------------------------------------------------------------------------------------------------------------|
| 1. | To introduce the students and understand Utilization of electrical energy for various applications like industrial heating. |
| 2. | To understand various techniques of electric welding and types of batteries.                                                |
| 3  | To understand the concept of illumination and study about the laws of illumination.                                         |
| 4  | To know the applications of various lamps to factory lighting, street lighting etc.                                         |
| 5  | To understand the concept of electric traction including speed – time curves of different traction services.                |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                                                      |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Identify a suitable heating scheme for a given application                                                                                           |
| CO-2 | Identify proper welding technique and various characteristics of batteries                                                                           |
| CO-3 | Study the nature and production of light and laws related to illumination.                                                                           |
| CO-4 | Classify types of electric light sources based on nature and operation and their objectives, performance and reliability                             |
| CO-5 | Determine the speed-time characteristics of various traction services and also estimate the energy consumption levels at various modes of operation. |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

### UNIT I

**Industrial Heating:** Advantages and methods of electric heating. Description, operation and performance of resistance ovens, Design of heating element. High frequency heating, Induction Heating, Induction furnaces, Core type, Coreless furnaces, Dielectric heating.

Electric Arc furnaces, Direct Arc furnace, Indirect Arc furnaces.

## UNIT II

**Electric welding:** Classification of electric welding, welding transformer and its rating, various types of Electric arc welding and electric resistance welding.

**Batteries:** Lead acid batteries, SMF batteries, Construction and maintenance, Charging and rating of batteries.

## UNIT III

**Illumination:** Introduction, nature and production of light, Sensitivity of the eye, Units of light. The inverse square law and cosine law, Solid angle, Lighting calculations, Determination of M.S.C.P, Rouseau's construction.

## UNIT IV

**Types of lamps** - Discharge lamps, Sodium vapour lamps, Mercury vapour lamps, Fluorescent lamp. Starting and power factor corrections, stroboscopic effects, Neon signs, Application to factory lighting, Street lighting and Flood lighting.

## UNIT V

Electric Traction: System of Electric Traction, Transmission of drive, Systems of track electrification, Traction mechanics, Speed time curves, Tractive effort, Power of Traction motor, Specific energy consumption, Mechanics of train movement, Coefficient of adhesion.

### Course Objectives

1. Understand electrical safety measures, the hazards associated with electric current, and voltage identify different types of electrical shocks
2. Understand installation work of electrical plant and equipment. Safety during installation of outdoor switchyard equipment, safety during installation of electrical rotating machines.
3. Understand procedure of domestic wirings ,to handle different domestic electrical appliances, Procedure of Agricultural pump installation
4. Identifies different hazardous zones, classification of equipment enclosure for various hazardous gases, importance of earthing system. Understand Management Safety Policy
5. Understand standards on electrical safety, different IE Rules and Acts

### Course Outcomes

After the completion of this course, the students shall be able to:

1. Explain the objectives and precautions of Electrical safety, effects of shocks and their prevention.
2. Summarize the safety aspects during installation of plant and equipment.
3. Describe the electrical safety in residential, commercial and agricultural installations.
4. Describe the various Electrical safety in hazardous areas, Equipment earthing and system neutral earthing.
5. State the electrical systems safety management and IE rules.

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively

### UNIT I

#### INTRODUCTION TO ELECTRICAL SAFETY, SHOCKS AND THEIR PREVENTION:

Terms and definitions, objectives of safety and security measures, Hazards associated with electric current, and voltage, who is exposed, principles of electrical safety, Approaches to prevent Accidents, scope of subject electrical safety.

Primary and secondary electrical shocks, possibilities of getting electrical shock and its severity, medical analysis of electric shocks and its effects, shocks due to flash/ Spark over“s, prevention of shocks, safety precautions against contact shocks, flash shocks, burns, residential buildings and shops.

## **UNIT II**

### **SAFETY DURING INSTALLATION OF PLANT AND EQUIPMENT:**

Introduction, preliminary preparations, preconditions for start of installation work, during, risks during installation of electrical plant and equipment, safety aspects during installation, field quality and safety during erection, personal protective equipment for erection personnel, installation of a large oil immersed power transformer, installation of outdoor switchyard equipment, safety during installation of electrical rotating machines, drying out and insulation resistance measurement of rotating machines.

## **UNIT III**

**ELECTRICAL SAFETY IN RESIDENTIAL, COMMERCIAL AND AGRICULTURAL INSTALLATIONS:** Wiring and fitting – Domestic appliances – water tap giving shock – shock from wet wall – fan firing shock – multi-storied building – Temporary installations – Agricultural pump installation – Do’s and Don’ts for safety in the use of domestic electrical appliances.

## **UNIT IV**

**ELECTRICAL SAFETY IN HAZARDOUS AREAS:** Hazardous zones – class 0,1 and 2 – spark, flashovers and corona discharge and functional requirements – Specifications of electrical plants, equipment for hazardous locations – Classification of equipment enclosure for various hazardous gases and vapours – classification of equipment/enclosure for hazardous locations.

## **UNIT V**

**SAFETY MANAGEMENT OF ELECTRICAL SYSTEMS:** Principles of Safety Management, Management Safety Policy, Safety organization, safety auditing, Motivation to managers, supervisors, employees.

### **REVIEW OF IE RULES AND ACTS AND THEIR SIGNIFICANCE:**

Objective and scope – ground clearances and section clearances – standards on electrical safety - safe limits of current, voltage –Rules regarding first aid and firefighting facility. The Electricity Act, 2003, (Part1, 2, 3, 4 & 5).

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                       |
|----|---------------------------------------------------------------------------------------------------------------------------------------|
| 1. | To understand the fundamental concepts of 3D Printing, its advantages and limitations.                                                |
| 2. | To know the working principle, advantages, disadvantages and applications of liquid, solid and Powder based 3D Printing Technologies. |
| 3. | To know the various types of STL file errors and other data formats used in 3D Printing Technology.                                   |
| 4. | To know the features of various 3D Printing software's.                                                                               |
| 5. | To know diversified applications of 3D Printing Technologies                                                                          |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                     |
|------|-----------------------------------------------------------------------------------------------------|
|      |                                                                                                     |
| CO-1 | Interpret the features of 3D Printing and compare it with conventional methods.                     |
| CO-2 | Illustrate the working principle of liquid, solid and powder based 3D Printing                      |
| CO-3 | Identify various types of errors in STL file and other data formats used in 3D Printing Technology. |
| CO-4 | Select suitable software used in 3D Printing Technology                                             |
| CO-5 | Apply the knowledge of various 3D Printing technologies for developing innovative applications.     |

**Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.**

### UNIT-I:

Introduction: Prototyping fundamentals: Need for time compression in product development, Historical development, Fundamentals of 3D Printing, 3D Printing Process Chain, Advantages and Limitations of 3D Printing, 3D Printing wheel, Commonly used Terms, Classification of 3D printing processes, Fundamental Automated Processes: Distinction between 3D Printing and Conventional Machining Processes.

## UNIT-II

Liquid-based 3D Printing Systems: Stereo Lithography Apparatus (SLA): Models and specifications, Process, working principle, photopolymers, photo polymerization, Layering technology, laser and laser scanning, Applications, Advantages and Disadvantages, Case studies. Polyjet: Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies

Solid-based 3D Printing System: Laminated Object Manufacturing (LOM): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies. Fused Deposition Modeling (FDM): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies.

## UNIT-III

Powder Based 3D Printing Systems: Working principle, Specifications, Materials used, Process, Applications, Advantages and Disadvantages, Case studies of the following 3D Printing Technologies like Selective laser sintering (SLS), Selective Laser Melting (SLM) and Direct Metal Laser Sintering (DMLS), Laser Engineered Net Shaping (LENS), Electron Beam Melting (EBM),

## UNIT-IV

3D Printing Data Formats & Software: STL Format, STL File Problems, Consequence of Building Valid and Invalid Tessellated Models, STL file Repairs: Generic Solution, Other Translators, Newly Proposed Formats. 3D Printing Software's Features: Magics, Mimics, Solid View, View Expert, 3 D Rhino, 3 D doctor, Flash Print, Object Studio, Cura, ITK Snap, 3-matic, Simplant, 3-matic, Simplant, MeshLab, Ansys for Additive Manufacturing.

## UNIT-V

Applications of 3D Printing : Application in Design, Application in Engineering, Analysis and Planning, Aerospace Industry, Automotive Industry, Electronic Industry, Jewellery Industry, Coin Industry, GIS application, Arts and Architecture. RP Medical and Bioengineering Applications: Planning and simulation of complex surgery, Customized Implants & Prosthesis, Design and Production of Medical Devices, Forensic Science and Anthropology, Visualization of Biomolecules. Biopolymers, Packaging, Disaster Management, Entertainment and Sports industry.

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|    |                                                                                                                                                           |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | To understand the theory and application of the finite element method for analyzing structural systems.                                                   |
| 2. | To learn Approximation theory for structural problems as the basis for finite element methods.                                                            |
| 3. | To learn formulations for a variety of elements in one, two, and three dimensions. Implementations of element formulations will be examined using MATLAB. |
| 4. | To understand modeling and analysis of structures using planar, solid, and plate elements                                                                 |
| 5. | To understand the theory and application of the finite element method for analyzing structural systems.                                                   |

### Course Outcomes :

On completion of this course, the student will be able to :

|      |                                                                                                                                                                      |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO-1 | Demonstrate a basic understanding of the concepts, mathematical formulation and numerical implementation.                                                            |
| CO-2 | Demonstrate the ability to invoke appropriate assumptions, select proper elements and develop FEA models that adequately and efficiently represent physical systems. |
| CO-3 | Underlying the FEA as applied to solid mechanics.                                                                                                                    |
| CO-4 | Solve 2D vector variable problems and analyze higher order elements and its applications.                                                                            |
| CO-5 | Create his/her own FEA computer programs using Matlab to solve simple engineering problems.                                                                          |

## UNIT I: INTRODUCTION

Historical Background – Mathematical Modeling of field problems in Engineering – Governing Equations – Discrete and continuous models – Boundary, Initial and Eigen Value problems– Weighted Residual Methods – Variational Formulation of Boundary Value Problems – Ritz Technique – Basic concepts of the Finite Element Method.

## UNIT II: ONE-DIMENSIONAL PROBLEMS

One Dimensional Second Order Equations – Discretization – Element types- Linear and Higher order Elements – Derivation of Shape functions and Stiffness matrices and force vectors- Assembly of Matrices – Solution of problems from solid mechanics and heat transfer. Longitudinal vibration frequencies and mode shapes.

### **UNIT III: TWO DIMENSIONAL SCALAR VARIABLE PROBLEMS**

Second Order 2D Equations involving Scalar Variable Functions – Variational formulation – Finite Element formulation – Triangular elements – Shape functions and element matrices and vectors. Application to Field Problems – Thermal problems – Torsion of Non circular shafts –Quadrilateral elements – Higher Order Elements.

### **UNIT IV: TWO DIMENSIONAL VECTOR VARIABLE PROBLEMS**

Equations of elasticity – Plane stress, plane strain and axisymmetric problems – Body forces and temperature effects – Stress calculations – Plate and shell elements.

### **UNIT V: ISOPARAMETRIC FORMULATION**

Natural co-ordinate systems – Isoparametric elements – Shape functions for iso parametric elements – One and two dimensions – Serendipity elements – Numerical integration and application to plane stress problems – Matrix solution techniques – Solutions Techniques to Dynamic problems – Introduction to Analysis Software.

### List of Experiments:

1. A) Determination of total dissolved solids  
B) Determination of total suspended solids  
C) Determination of fluorides
2. Determination of total hardness
3. Determination of alkalinity
4. Determination of chlorides
5. Determination of sulphates
6. Determination of MPN
7. Determination of residual chlorine
8. Determination of optimum alum dosage
9. Determination of BOD
10. Determination of COD

### Course Objectives :

The course is taught with the objectives of enabling the student to:

|   |                                                         |
|---|---------------------------------------------------------|
| 1 | Identification of the research problem                  |
| 2 | Discussion and critical appraisal of literature review. |
| 3 | Discussion of Methodology for the research problem      |

### Course Outcomes :

On completion of this course, the student will be able to :

|             |                                                                                                   |
|-------------|---------------------------------------------------------------------------------------------------|
| <b>CO-1</b> | Identify Civil Engineering problems by reviewing available latest literature                      |
| <b>CO-2</b> | Study different techniques and analyze the systems.                                               |
| <b>CO-3</b> | Provide appropriate solutions for the identified problem & submission of the comprehensive report |

**Correlation rating: Low/ Medium/High: 1/2/3 respectively**

1. Mini Project will have End Semester Evaluation. The evaluation includes Presentation containing identification of the problem based on the literature review on the topic referring to latest literature available.
2. End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution. Continuous assessment of Mini Project will be monitored by the departmental committee. It should encompass components, devices, with which functional familiarity is introduced.
3. After interactions with course coordinator and based on comprehensive literature survey/ need analysis, the student shall identify the title and define the aim and objectives of mini-project.
4. Student is expected to detail out specifications, methodology, resources required, critical issues involved in design and implementation and submit the proposal within first week of the semester.

5. The student is expected to exert on design, development and testing of the proposed work as per the schedule.
6. Completed mini project and documentation in the form of mini project report is to be submitted at the end of semester.

**Course Objectives:**

- To expose the students in understanding the real-life practical problems and technologies.
- To provide an opportunity to integrate various aspects of learning reference of practical problems.
- To enhance the confidence of the students by interaction with field professionals

**Course Outcomes:** Student will be

1. Able to design or develop a simple software suitable to industry
2. Able to complete the task or realize a prescribed target within a limited scope.
3. Able to learn to find alternate viable solutions for a given problem based on criteria.
4. Able to learn new software suitable for Civil Engineering problems.
5. Ability to learn field constraints and also documentation of technical report.

**Correlation rating: Low/ Medium/High: 1/2/3 respectively**

Summer Internship is introduced as part of the curricula to encourage students to work on problems of interest to industries or in a consulting organization. A batch of two or three students will be attached to Industry/ R & D Organization / National Laboratory / Consultants / Project offices/ Executing Agencies /Departments/ Private Builders for a period of SIX weeks. This will be during the summer vacation followed after the completion VI semester course. Faculty member (s) will be acting as an internal guide(s) for the batches to mentor and monitor the progress and also interacts with the Industry guide (s) as per the need.

After the completion of the internship, students need to submit a brief technical report on the project executed and present the work through a seminar talk to be organized by the Department. The performance of the student will be judged by internal guide (s) followed by presentation before the committee constituted by the Department. One faculty member will coordinate the overall activity of Summer Internship.

*\*Students have to undergo summer internship of 6 Weeks duration at the end of semester VI and evaluation will be done in VII semester.*
